Members of the Nuclear Waste  
Management Organization:

The Minister of Energy, Dwight Duncan, suggested I pass my comments on to you.

No nukes. I used to be all for them. Heck, I even spent some time helping to build Darlington Generating Station. But with time comes wisdom.

When I think what the oldest buildings on earth are, how old they are, their ruinous condition, and, when I think that we will have to keep spend fuel rods around for how long!??

I shake my head. I simply shake my head: the tremendous burden we put on future generations - who will profit nothing from our wastefulness.

We cannot use nukes as an answer. This is what brings me to write. I am shamed the way our forefathers treated and mistreated native indians, taking their land, etc. Our descendants will be shamed, as they look around and see wind, solar providing energy needs, and wonder how the blankity, blank blank we, you and I, left such a tragedy: spend fuel rods to be monitored for many many years.

This is what troubles me. I do not think 'science' will come up with an answer to disposal of said rods.

Please think long term.

Yours truly,

Stephen J. J. Armitage
