Implementing Adaptive Phased Management 2010 to 2014

DRAFT FOR REVIEW

1. The draft Plan is built around seven strategic objectives. Are the objectives that we have identified appropriate? Have we missed key areas?

An accident plan is important "What to do in case of accident scenarios ie flooding, leaking, spills etc. An emergency plan for all possible scenarios ie terrorists, earthquake, Follow up health studies - keeping statistics on the local population for health impact."

2. The draft Plan identifies work and activities we propose to undertake to accomplish these objectives. Have we set out appropriate activities?

Achieving an informed willing host by hiring nuclear experts outside of the nuclear energy industry to ensure that the information is complete & not biased

3. What more would you like to know about the NWMO's implementation plan?

What information is being given to the host community? How much is this project going to cost at today's prices & who is going to ensure the funds are available?

4. Other comments?

Are you concerned that to date there is not one successful deep geological repository on the Planet?
Do you have a Plan "B" for the storage of high level waste if it becomes clear this is not going to work?
