LOUIS CHAREST

- 1- This approach, in my opinion, is a mix of the three approaches. It allows for many adaptations and has the advantage of being flexible to be adapted to technological breakthroughs and to research conducted in other countries.
- 2- For someone who is opposed to nuclear power based on the argument that we do not know what to do with the residual matter, it is an approach that seems to postpone the solution as far into the future as possible.
- 3- Shorten Phase 1 as much as possible. The first part, which takes at least 10 years, may seem like an eternity to ordinary people, who may think, based on their experience, that the government could extend it even further.
- 4- --
- 5- In the document, there is no specific delay for the government to give the go ahead signal or acceptance of the adaptive phased management approach.
