Implementing Adaptive Phased Management 2011 to 2015

DRAFT FOR PUBLIC REVIEW

1. The draft Plan is built around seven strategic objectives. Are the objectives that we have identified appropriate? Have we missed key areas? The objectives identified in the draft plan are appropriate. I think the probability of hazard and it's extent should also be included in this plan. General public are always concern of the danger of nuclear waste.

2. The draft Plan identifies work and activities we propose to undertake to accomplish these objectives. Have we set out appropriate activities? I think the appropriate activities are set out.

3. The draft Plan is intended to anticipate the challenges ahead and plan for them. Over the next five years, what are the key challenges that will need to be addressed? what are the emerging research priorities?what progress is being made? how can funding and implementation bodies be configured to encourage talented scientists to build long-term careers in this area?what are the alternatives to geological disposition?

4. What will the NWMO need to put in place to respond to these challenges? Alternatives to geological disposition: surface storage/consolidated locations, advanced separation process including partitioning and transmutation and disposal in outer space, mined repositories

5. Other comments, questions or suggestions?
